AUCTIONEER: ROBBIE BLOCH

WELCOME TO SARA PARK & DUDDY ANGUS ANNUAL BULL SALE

As we prepare for our 2025 sale, we do so with gratitude - for the season, for the strength of the Angus breed, and for the many loyal clients who continue to back our program.

It's been one of the softest winters in memory here in New England - wet, mild, and green. While some southern areas have done it tough, much of our region and parts of Queensland have had a good run. With cautious optimism in the market and encouraging commentary around the spring outlook, there's reason to be hopeful. A turnaround in the south could well shift the entire national tone in a positive direction.

If the past few years have shown us anything, it's the strength of Angus cattle across a variety of markets. Angus gives you options: whether you're selling feeders, finishing cattle, or retaining females. It's been heartening to see premiums continue in feedlot grids, and to hear from clients, particularly New England's cow-calf producers, who value fertile cows that stay sound and raise high-quality steers.

At Sara Park, we've always believed genetic improvement doesn't come from turning over females quickly. In fact, some of our most valuable cows are now 13 or 14 years old. They've earned their place in the herd by consistently weaning good calves, and they pass on the trait we value most in a maternal line: longevity. That female longevity is built into our herd and reflected in the kind of bulls we offer. Bulls bred from cows that last.

Temperament is another priority that's never changed. Time and again, surveys show that docility is the number one trait producers look for in a bull, and we absolutely agree. We've always culled hard on temperament. Quiet, easy-handling cattle are safer to manage and easier to run in larger numbers. The bulls in this year's sale reflect that standard.

This year also marks a meaningful milestone with the third generation of the Duddy family offering bulls for the first time. It's been exciting to see our younger generation not just involved but making a real contribution with 3 grandchildren profiling their bulls in the lineup this year. Duddy U5 is a standout example, ranking in the top 1% of the breed for docility. If quiet cattle are a priority, this bull is hard to go past. He sits in the top 20% for growth and offers IMF that lands comfortably in the top third. Duddy U101 by Texas Maverick has caught our eye from day one with depth, softness and growth. Duddy

U109 is another strong type, very correct structurally with the kind of outlook and presence that appeals to commercial breeders. And of course, Pop has been delivering the goods from the start – a lifetime of stockmanship and cattle sense that's clearly been passed down.

People often talk about “balance” in breeding, and we do too. But when we stepped back and looked across the entire operation, right across the family herd, the data told the story. We pulled an average trait distribution graph and found that no single trait dominated. Instead, we saw a genuine spread across fertility, structure, carcase, growth, all sitting in harmony. It confirmed what we'd hoped: when we say we breed for balance, the data backs us up. And despite having more decision-makers involved than ever before, that consistency shows that we are all pulling in the same direction.

As always, balance remains at the heart of our breeding philosophy. Our cows need to be fertile and functional, and our bulls need to combine softness, structure, and carcase quality. We're proud of the consistent draft on offer this year, a line that includes a variety of sires but is held together by the depth and quality of our Sara Park females.

This is our third sale at “The Downs”, a place that has become central to our operation and family story. Having everything in one place has brought efficiency and scale to the herd. We're now three generations working together, and that mix of experience, energy and fresh perspective is something we're proud to share.

Thank you to all who support us - our clients, agents, and wider network. We appreciate your trust, your feedback, and your belief in what we're building. We look forward to catching up at the open day, and to welcoming you back to “The Downs” on sale day.

Herb, Jeff & Robert Duddy

Sara Park Angus & Duddy Angus

SALE INFORMATION

GST

GST is to be added to the purchase price at the fall of the auctioneer's hammer. You will be invoiced the purchase price plus GST.

REBATE

A 2% rebate will be offered to outside agents introducing buyers in writing 24 hours prior to the sale and settling within seven (7) days of invoicing.

FERTILITY

All sale bulls have passed a thorough fertility examination carried out by the Glen Innes Veterinary Hospital.

This examination includes semen viability, palpation of the reproductive organs and inspection of the penis and scrotum. Their scrotal circumference has also been measured.

INSPECTION

Bulls may be inspected prior to the Sale by contacting the vendor or selling agents.

Cattle will be available for inspection from 10am on sale day.

HANDLING

At Sara Park, we handle our cattle quietly and confidently, we always give our cattle respect, and our cattle respect us.

We use a 4-wheel motor bike and a ute, with controlled use of dogs. The bulls have not been handled with horses.

REFRESHMENTS

A light luncheon will be provided on sale day.

ADDITIONAL DATA

Raw data including scan measurement, weights and other information will be supplied on sale day.

INSURANCE

There is no vendor insurance on sale bulls. It will be the responsibility of the buyer to insure their purchases. Representatives from insurance companies will be in attendance and can offer insurance terms on sale bulls.

WARRANTY

The vendor warrants that:

1. Bulls are fertile and capable of natural service within 6 months of date of sale to the purchaser ("Warranty Period"); and
2. Bulls are of the parentage catalogued.

With the return of the bull the vendor will either:

1. Provide a satisfactory replacement; or
2. Provide a credit for use at the next Sara Park Angus bull sale equal to the purchase price (excluding any costs and expenses of the purchaser in taking delivery) minus salvage value:

Where:

1. The purchaser claims a bull is infertile, upon purchaser submitting a veterinary report after the expiration of the Warranty Period stating that the bull is infertile or incapable of natural service and a Statutory Declaration by the purchaser to the effect that the substance of the report is true and correct. The veterinarian must state that in his/her opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The veterinary report and Statutory Declaration must be forwarded to the seller within 14 days of the Warranty Period expiring.
2. The purchaser claims the bull is not of the parentage catalogued, upon purchaser submitting a DNA test or blood test within the Warranty Period indicating that the animal is not of the stated parentage.

The purchaser acknowledges that the purchaser does not rely and it is unreasonable for the purchaser to rely on the skill or judgement of the seller as to whether the bulls supplied are reasonably fit for any purpose for which they are being acquired.

To the extent permitted by law all other conditions and warranties implied by law in respect of the state, quality and condition of the bulls which may apart from this clause be binding on the Seller are excluded.

The seller has no liability (including liability in negligence) to any person for any loss or damage consequential or otherwise suffered or incurred by that person arising from the sale of the bulls to the purchaser.

Please bring this catalogue to the sale to be sure of having one.

BULL PREPARATION & HEALTH

Lots	Bull Preparation	Health
Sara Park Lots 1-16 Lots 35-66	All Sara Park Bulls were weaned onto pasture grass and have not been supplemented at all. These bulls have been prepared on rye grass and oats since April. They will present in excellent working order.	All Sara Park bulls have been treated with <ul style="list-style-type: none"> • 3 day sickness + boosters • 7 in 1 + boosters • Nilzan LV • Cydectin
Duddy Angus Lots 17-25	Bulls were weaned onto pasture and have run on rye and brassica for the last 10 weeks prior to sale. Sale bulls have been semen tested, vet checked and present in excellent working condition.	Bulls have been treated with: <ul style="list-style-type: none"> • 3 day sickness + boosters • 7 in 1 + boosters • Selovin • Flukazole • Ivermectin pour-on
Duddy Angus Lots 26-34	Bulls were weaned onto pasture and have since run on oats and rye grass. Sale bulls have been semen tested, vet checked and present in excellent working condition. These bulls have been handled with horses.	Bulls have been treated with: <ul style="list-style-type: none"> • 3 day sickness + boosters • 7 in 1 + boosters • Flukazole C • Ivomec Injectable
Sara Park and Duddy Angus are located in a Bovine Johnes Protected Area		

DELIVERY OF YOUR NEW BULL

To help your new bull or bulls settle into their new home as well as possible, we recommend the following:

All Sara Park bulls have been run in large mobs all their life, so they have had plenty of mates around, and have never been alone. It is a good idea to have some of your own cattle in the yard when your new bull or bulls arrive, a handful of steers or some PTIC cows or even an old bull, just something to keep them company, whilst they survey their new surroundings.

At Sara Park, we handle our cattle quietly and confidently, we always give our cattle respect, and our cattle respect us. We use a 4-wheel motorbike and a ute, with controlled use of dogs. **The bulls have not been handled with horses.** Handle your new bull or bulls quietly and with respect and he will settle into his new home well and will be easy to handle when the need arises. The bulls are in good joining condition at point of sale, but it is imperative to ensure good nutrition for the bull during the joining period. You should check the bulls regularly to see they are working especially in the early stages of joining when the majority of problems occur and early intervention can minimise the damage to the bull and to conception rates.

When joining is complete, bulls should be drenched and placed on good pasture to get back into first grade health without being allowed to get to over fat or too poor condition.

SALE DAY SAFETY

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with cattle handling. **Visitors Enter the cattle pens at their own risk. Children must not enter the yards.**

People entering the yards are at risk of injury. Be especially alert for bulls fighting and if one is playful with you, do not respond by patting his head. What a bull considers a playful nudge can break human legs! We do not expect the bulls to be aggressive with humans, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember the quietest bull is in fact an unpredictable animal. Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling, so please use common sense and be alert at all times. Don't enter the pens unnecessarily. If you feel threatened whatsoever, please do not act hardy. The stigma of a person screaming as he dives over a fence is a preferable option to a broken body resulting from "standing up to" an unfamiliar beast.

Please call upon any of the agents for an escort through the bulls if required. The days of bravado with stock have passed under current OH&S legislation.

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

* Breed average represents the average EBV of all 2023 drop Australian Angus and Angus-influenced seedstock animals analysed in the Mid June 2025 TransTasman Angus Cattle Evaluation

* The percentile band represents the distribution of EBVs across the 2023 drop Australian Angus and Angus-influenced seedstock animals analysed in the Mid June 2025 TransTasman Angus Cattle Evaluation

HOW TO REGISTER with

Follow these easy steps to start bidding:

Visit www.stocklive.com.au using your desktop, laptop, iPad, iPhone or Android device. NO App required.

Select the **bid** icon beside the sale you wish to bid on.

If you're new, select **register**, and complete the form with all your details, **accept sale conditions**, select **create bidder registration**.

You will receive an email from StockLive. Select "**Confirm my bidding account**" to set your password and **accept Bidder Account Terms & Conditions** and Privacy Policy followed by **create my account**.

Congratulations! Your StockLive account has been created and your bid request is pending. You will be notified via email when your request to bid has been approved.

Existing users, follow steps 1 & 2, select login, enter your details followed by the **request to bid** icon beside the sale you wish to bid on and then **accept** the terms.

On Sale Day, follow steps 1 & 2, select **enter auction** to watch, listen and purchase when the sale is flashing **LIVE**.

Invoicing and delivery will be carried out as per your registration details by the respective Selling Agents.

Balance remains at the heart of our breeding philosophy.
Our cows need to be fertile and functional
Our bulls need to combine softness, structure
and carcass quality.

LOT 17 DUDDY ICONIC U5 PV

BORN: 11/08/2023

IDENT: CRD23U5

Traits observed: GL,BWT,Genomics

Notes: A deep-bodied, wide-based son of DB Iconic, U5 is structurally sound and has that soft, quiet presence we value. He joined 20 heifers on native country and held condition easily. With top 1% docility, top 13% 400-day weight and IMF in the top third, he combines carcass quality with commercial functionality. We intend to retain semen rights for in-herd use and for nomination to the Angus Sire Benchmarking Program (ASBP). A genuine sire prospect with long-term value, U5 is the kind of bull that builds herds.

Traits observed: GL, BWT, Genomics

Notes: A later-maturing son of Sterling Pacific, U18 is a larger-framed, structurally correct bull with depth, softness and presence. Used successfully as a yearling, he's backed by a 13-year-old cow who calves reliably each year. Sterling Pacific has performed well across both Duddy Angus and Sara Park, with U18 showing the same mobility, docility and thickness. With top 5% IMF, top 15% docility, top 16% Days to Calving and top 11% on the Angus Breeding Index, he combines fertility, carcass quality and temperament in a well-balanced package.

Perc	21	32	14	7	80	65	72	69	79	44	25	52	28	36	49	41	28

Traits observed: BWT,Genomics

Notes: The following 4 lots were born in mid-November on a lease block of unfertilised native grasses, and didn't get the best start. U33 has excellent growth, has an even set of data from low birth weight of +1.2 to +3.3 IMF. An embryo calf bred from a wide deep cow N122 that has bred consistently over the years. Could suit heifers.

Recessive Genetic Conditions

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which

can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

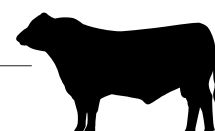

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia (02) 6773 4600.

THANK YOU

As we wrap up our 24th Annual Bull Sale, we'd like to extend a sincere thank you to everyone who helped make the day a success.

To our selling agents, AWN Squires and APL Group, thank you for your ongoing support, advice and professionalism. Your efforts behind the scenes and on sale day help things run smoothly, and your partnership is greatly valued.

Thanks also to our caterers, who we know will do a fantastic job on Sale Day. It's a pleasure to support a local cause, and we're proud that our contribution will go directly towards supporting your important community fundraising efforts.

Most of all, thank you to our clients, friends and supporters. Whether you've been with us since the beginning or have only recently come on board, we're grateful for your trust in our cattle and our program. Your support is what keeps us going, generation after generation.

We're proud to be doing what we love, on country that means a lot to us, with cattle we believe in. Thank you for being part of the journey.
